

This is an example of a \LaTeX document using the near-number symbol font (`nnsy`), as defined in the package `nnsy` and the associated MetaFont files. These adornment symbols are defined so as to position themselves well when used as superscripts when typesetting near-numbers.

The symbols included are as follows:

| | |
|------------------|--|
| $+ / \star$ | <code>\NNp</code> and <code>\NNpd</code> |
| $- / \bullet$ | <code>\NNm</code> and <code>\NNmd</code> |
| \pm / \ddagger | <code>\NNpm</code> and <code>\NNpmd</code> |
| \star | <code>\NNstar</code> |
| \bullet | <code>\NNdot</code> |
